## MSC considers its carbon position

Shipping group joins the Hydrogen Council as it looks to collaborate on decarbonisation

**M**editerranean Shipping Company (MSC) has announced it has joined the Hydrogen Council to help foster cross-sector collaboration that will accelerate R&D related to clean hydrogen-derived fuels and solutions.

According to MSC, the initiative is part of its wider approach to decarbonisation which has already seen the company pioneer the use of biofuels as a blended marine fuel, and now sees it work with others to advance the exploration viability of hydrogen and fuels derived from it as potentially viable fuel sources for

container shipping.

"MSC is actively engaging with a wide range of stakeholders to accelerate the development of clean hydrogen fuels for shipping," said Bud Darr, executive vice-president, maritime policy and government affairs, MSC Group.

"The future of shipping and decarbonisation will rely on strong partnerships from both the perspective of technology collaboration and procurement," he explained. "There must be a massive injection of energy and capital into R&D efforts to bring alternative fuels

and alternative propulsion technologies to the marketplace to decarbonise all industries in the longer term.

"Initiatives such as the Hydrogen Council provide just the right platform to accelerate R&D, as well as to facilitate cross-industry collaboration."

The Hydrogen Council is a global CEO-led initiative that brings together leading companies with a united vision and long-term ambition for hydrogen to foster the clean energy transition.
