## Unitec releases Blueberry Vision 3

Italian technology specialist showcases new internal grading solution at Fruit Logistica

**U**nitec has used this week's Fruit Logistica trade show as a platform to unveil Blueberry Vision 3.

An upgrade of the company's market-leading Blueberry Vision 2 solution, Blueberry Vision 3 measures the internal quality of the popular berry fruit.

The far-sighted Blueberry Vision 3 was developed to allow a full range of updates, thereby delivering higher-levels of productivity,

reliability and efficiency than any other solution on the market, according to Unitec.

"Blueberry Vision 2 was the first technology in the world able to inspect 100 per cent of every blueberry surface," the company said. "Blueberry Vision 3 is equipped with much higher resolution cameras, that enable a greater, more precise and reliable quality selection of the fruit."

The Italian technology

specialist has also showcased a range of its other products at this week's trade show, including the popular Cherry Vision 3.0 platform, launched in Berlin one year ago.
